Introducing Lower kVAR StacoVAR® mini

Now Available

Dayton, OH – Staco Energy Products introduces the new lower kVAR cost efficient line for StacoVAR® mini – a wall mountable automatic power factor correction bank which utilizes the same components as the current legendary StacoVAR® mini by maintaining the desired power factor level utilizing the microprocessor based controller to adjust to system load conditions. Rugged metalized poly-propylene dry type capacitors are efficiently placed in a smaller compact enclosure. Capacitor-rated contactors with damping resistors reduce back-to-back switching currents. The new StacoVAR® mini accurately regulates power factor automatically, making it ideal for lower kVAR ratings in small industrial and commercial environments where there are power factor penalties.

(continued)

This compact high quality design includes capacitors, reactors, contactors and fuses – and is UL Listed. Capacitors provide highly efficient power factor correction, low watt loss, long life and reliable operation. The robust heavy duty design includes environmentally friendly, self-healing metalized polypropylene film dry type capacitors. Each UL recognized capacitor is contained in an aluminum cylindrical housing and incorporates an over-pressure device and discharge resistor safety system. Capacitors include a 5-year warranty.

“This new UL Listed StacoVAR mini extended kvar range product allows smaller industrial and commercial customers to apply power factor correction in a cost effective manner in tight spaces often providing a payback in two years or less”, says Rich Zuccaro, Staco Power Factor Program Manager.

Staco Energy Products Company manufactures voltage control, VAR compensation, uninterruptible power supplies and engineered power quality solutions. For more than seventy five years, customers worldwide have relied on Staco as their dependable source for standard and tailored solutions to a wide range of electrical power problems. Headquartered in Dayton, Ohio, Staco Energy Products is a wholly owned subsidiary of Components Corporation of America, located in Dallas, Texas.
