NETA Strengthens Relationships at the 2016 International Conference of Doble Clients

NETA's presence at show engages power engineers, generation and transmission professionals, and facility managers by promoting the importance of acceptance and maintenance testing of electrical power equipment and systems.

Portage, Michigan, July 21, 2016– At this year's International Conference of Doble Clients, held in Boston, Massachusetts, April 3-8, NETA, InterNational Electrical Testing Association, met its goal of building and reinforcing relationships within the power generation and transmission industry. The conference is considered one of the world's leading events for the electrical power systems industry.

NETA's standards for acceptance and maintenance testing of electrical power equipment and systems were available for purchase at the NETA booth, where attendees were able to preview the extensive standard documents and consult with experts from NETA Accredited Companies who were happy to field questions. Additional NETA publications such as the NETA Handbooks, *NETA World Journal*, and NETA training products were popular as well. The NETA Handbooks, Series I and II, were also on display and are a popular resource for training among engineers and educational program managers.

"The Doble show is a big opportunity for NETA to meet new people, build new relationships, and fortify existing ones," says Missy Richard, NETA's Executive Director. "We approach this annual opportunity fully prepared to inform, educate, and inspire all attendees to follow the ANSI/NETA standards to ensure a safe and sustainable power generation and transmission industry." Representatives from NETA Accredited companies (including 3-C Electrical Co., Inc.; American Electrical Testing Co., Inc.; and Western Electrical Services, Inc.) connected with professionals involved with the development of NERC standards and power quality, demonstrating NETA's support for the electrical power generation, transmission, and distribution industry.

Doble Engineering Company is one of seven Corporate Alliance Partners with which NETA is working to help advance safety and reliability within the electrical power systems industry. NETA recognizes the Doble conference as one of the most technically-oriented educational events held annually for a key sector of the electrical power systems industry and appreciates the opportunity to participate.

ABOUT NETA

NETA is an ANSI Accredited Standards Developing Organization that creates and maintains standards for electrical maintenance and acceptance testing for electrical power equipment and systems, as well as a standard that addresses the certification of electrical testing technicians. NETA is an association of leading electrical testing companies comprised of visionaries committed to advancing the industry standards for power system installation and maintenance to ensure the highest level of reliability and safety.
