## Upcoming April Webinar

### Cable Fault Location 202: Advanced Techniques

Join us on **Friday, April 21, 2017 at 10:00 A.M. CT** to learn more about alternatives to standard ARM approaches and shed some light on other methods like transient and HV Bridge methods.

This webinar will discuss the specific differences between fault locating on solid dielectric insulated cables and paper-insulated lead covered cables (PILC). You will also learn about applicability and limitations of various techniques and a systematical approach to find the next tricky fault in your system

[Register today](#) to secure your spot!

Attendees of the live webinar will receive **0.1 CEU** (Continuing Education Units) or **1 PDH** (Professional Development Hours).

**Unable to attend the webinar on the scheduled date?** No worries. Go ahead and register and even if you can't attend, we'll still email you a video recording of the webinar!
